

Quality Policy

It is the company's aim to be the United Kingdom's leading multi disciplined engineering, project management and construction organisation delivering a professional service to the oil, gas and power industries, ensuring we achieve sustainable long term market share and profitability.

The company will strive to meet these stated aims by:

- Ensuring management processes across all operations are subject to continuous improvement, taking into account more creative solutions, utilising internal communications, teamwork and employee's professionalism, vision and commitment.
- All Managers to ensure there is clarity of purpose and direction by which their reportees can become fully involved in achieving the company's objectives. Business decisions shall be based upon analysis of the available data and information in relation to the objectives set.
- Developing mutually beneficial relationships with clients and suppliers enabling all parties to share in the benefits achieved.
- Ensuring current and future customer requirements and expectations are identified and suitable processes are established in such a way that products and services are delivered in the most efficient and effective manner.
- Identifying and managing interrelated processes as a system and monitoring process effectiveness using defined Key Performance Indicators to ensure planned activities are realized in the most cost effective manner.
- All employees being involved in the development and implementation of the management systems and are allocated tasks based on their skills and competence.
